MEGAVAC, QUIETPRO BP DISCONTINUED

ProTeam will be discontinuing the cylindrically shaped MegaVac® and QuietPro® BP backpack models, **effective April 1, 2024**. New orders will be accepted through 3/31/2024 and filled immediately thereafter. No new orders will be accepted beginning April 1.

We will continue to provide unique service parts for these models for at least 3 years. The Intercept Micro® Filters are expected to be available well beyond 3 years.

For those looking for a blower feature, our new GoFit® Blower Door Accessory Kit (SKU 107676) will easily convert any GoFit corded backpack to a blower simply by swapping out the exhaust filter doors with the two kit doors.

One door is solid, redirecting the airflow to the other door, which has an exhaust port to which the hose is attached. When ready, swap the doors back to the original exhaust doors to return to vacuuming mode.

This accessory kit can be used with all four GoFit corded models – GoFit 3, GoFit 6, GoFit 6 PLUS and GoFit 10.

All ProTeam backpack models are designed with low sound in mind, and operate at a decibel (dBA) level under 70 – meeting the vacuum cleaner requirements for green cleaning credits under LEED v4.1 Building Operations and Maintenance.
